5. Dimension

6. Note the use of preservation

1. Meter needs to pre-heating 15 minutes before be used;
2. Appropriate ambient temperature is 0 --40℃, humidity under 85% R.H.
3. Each meter's Calibration interval is one year;
4. Attention to preventing from vibration and shock, keep away from such places:
Excessive dust, Excess of harmful chemicals & Excessive harmful chemical gases;
5. If the input signal accompanied by high-frequency interference, a High-frequency filter is necessary be used;
6. Input wire should not be too long. If the distance between the measured signal output terminal and instrumentation can not be shortening, please use twisted-pair shielded cable, and please make sure that shielding layer and the signal connected to the low-end;
7. Mak sure that the meter powered once every three months if the long-term storage at the end use, and each time's POI not less than 4 hours
8. Long-term preservation should avoid direct light, the most comfortable storage place with temperature 10℃ to 70℃, humidity below 60% R.H. Keep away from organic solvent or oil-exposed.
